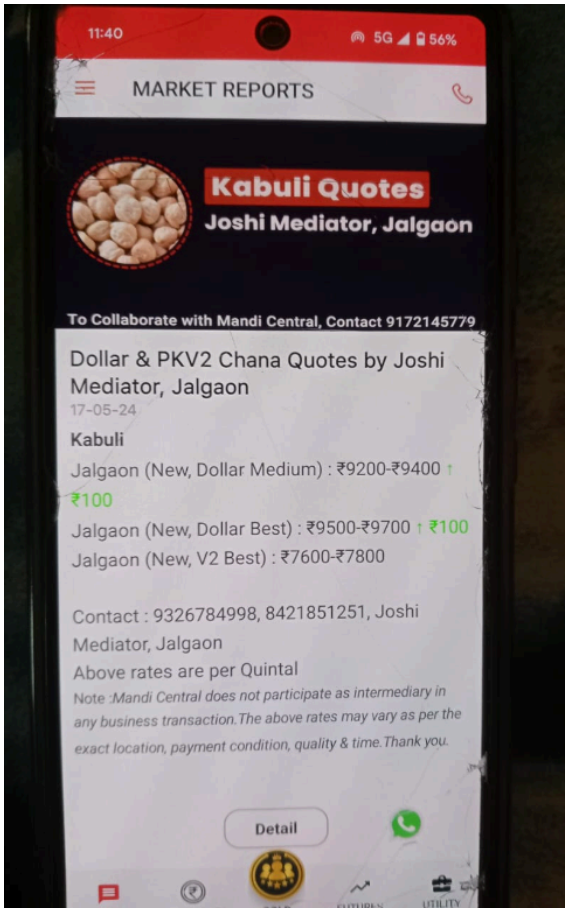
App Requirements:

1. Login/Signup with otp.
2. Check for Subscription (Will send a parameter from backend).
3. Display one record(it can be anything only message, message and image, pdf, excel).
   Eg.



4. Another page displaying categories and on clicking on that category it shows the list of records only of that category. List will contain same records as above.

So, basically login/signup page, and one overall list page, one category list page and on click on that category a list page of records only of that category. Record can include -> only message, message and image, pdf, excel.
